

1. Fast and easy configuration of the key to a MySQL account (login, password, host, port and other options) with the possibility to automatically update the key on the next access. 2. Keyboard shortcuts configuration for connection, configuration, tables, display, user management and reporting. 3. The Macro includes a MySQL connector to work with the MySQL server and provide access to the MySQL database, as well as the ability to automate all MySQL processes. 4. Ability to encrypt data and create MySQL credentials. MySQL Query Monitor is a powerful monitoring tool with a graphical user interface. It is designed to monitor the activity and performance of all MySQL databases and ensure the highest level of availability. If you are using MySQL for performance tuning purposes, then this utility is a must. It will help you with monitoring all MySQL activity and performance. MySQL Query Monitor is a powerful monitoring tool with a graphical user interface. It is designed to monitor the activity and performance of all MySQL databases and ensure the highest level of availability. MySQL Query Monitor is a flexible monitoring system and it can be used for any MySQL environment. It is a utility for free which does not require installation, however, it should be run in a privileged environment, i.e. where your MySQL service is running. What does it do? Monitor: It is capable of monitoring every MySQL database, table, user, etc. You can easily identify which database consumes the most resources and enable MySQL Query Monitor to monitor the database usage more often. Database: MySQL Query Monitor can monitor every MySQL database on the server. Database monitoring: MySQL Query Monitor includes the ability to create a database backup, open it and restore from it as well as see the database schema. Lock Monitoring: MySQL Query Monitor can monitor MySQL locks, i.e. tables where another user is currently working on or a transaction is in process. User Monitoring: MySQL Query Monitor can monitor MySQL users, i.e. users on a specific database, enabling you to watch the usage of every user. User monitoring: MySQL Query Monitor includes the ability to query the MySQL information\_schema tables and gain insight into the system structure and user accounts. Event Monitoring: MySQL Query Monitor can monitor events from the MySQL server. Event monitoring: MySQL Query Monitor can monitor all MySQL events such as crash, crash recovery, deadlocks, locks, replication and so on.
