Generally speaking, how much traffic can a chat room get on the network? I'm asking for maximum, not average. For example: if a particular room can take 100 visits a day, can it take 3000 visits a day? Is there any data to back it up? If so, what was the maximum traffic for any particular chat room? A: Because the whole point of chat rooms is that they're ephemeral, there's a limit on the traffic they can consume. For chat rooms, the limit is a bit higher than just posts for the room. There's a need to transfer files in chat rooms, for example if someone wants to embed chat-room-related images (a picture of the founders or logo, for example) that have to be loaded into the chat room. For chat rooms there can be a limit on the number of concurrent users as well. For Skype, this is the same as for any regular chat room. For example, say a room has, say, 100 concurrent users. Then if there's another room that also has 100 concurrent users, then if both of those rooms try to start a chat at the same time, then there may be a maximum of 200 concurrent users allowed in the network. For chat rooms, the limit is also per IP address. This could mean that, for example, if someone joins chat.stackoverflow.com from an Internet connection that isn't in the US, then as long as they're just sending/receiving messages, there's no limit on the number of concurrent users they can be a part of. But if someone 55cdc1ed1c
